Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/lone="Organ: eys Vector: pOTB7; Site_1: XhoI; Site_2:
ECORI; CDNA made by oligo-dT priming. Directionally
cloned into ECORI/XhoI sites using the following 5'
adaptor: GGCACGAG(G). Library constructed by Ling Hong
in the laboratory of Gerald M. Rubin (University of
California, Berkeley) using ZAP-CDNA synthesis kit
(Stratagene) and Superscript II RT (Life Technologies).

/clone lib="NCI CGAP FGI"
/note="Organ: Enchondroma; Vector: pT7T3-Pac (Pharmacia)
with a modified polylinker; Site 1: ECOR I; Site 2: Not I;
NCI CGAP FGI is a normalized cDNA library obtained from a pool of mRNA from 2 cell lines from Enchondroma tissues.
The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CGGTCACTC. The cell lines were provided by Dr. James Martin from the University of lowa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACGCATCGTGTGGCCCTCCCCTCCCACCTCCCTGTGTATAATATTTACATGTGATGTCT 1016

New human neuron-associated proteins and polynucleotides encoding them, useful for diagnosis, treatment and prevention of cell proliferative disorders including cancer, neuronal and neurological disorders

9; Page 136; 145pp; English. Claim

treating or preventing a disorder associated with decreased expression or activity of NEUAP. Antagonists of NEUAP are useful for treating or preventing disorder associated with increased expression or activity of NEUAP. NeUAP or their fragments or derivatives are useful for treating neurological disorder such as epilepsy, ischemic or activity of NEUAP. NEUAP or their fragments or derivatives are useful for treating neurological disorder such as epilepsy, ischemic cerebrovascular disease, Huntington's disease, dementia and Parkinson's disease, Huntington's disease, dementia and Parkinson's disease. NEUAPS are also useful for treating other demyelinating diseases. NEUAPS are also useful for treating other cerebrough and viral meningitis, prion diseases including kuru, Creutzfeldt-Jakob disease, nutritional and metabolic diseases of the nervous system, neurofibromatosis, other developmental disorders of the central nervous system disorders, plass, neuroskeletal disorders, autonomic nervous system disorders, creanial nervous system disorders, cranial nervous system disorders, inherited, metabolic, endocrine, and toxic myopathies, mental other metabolic, endocrine, and toxic myopathies, mental disorders including mood, anxiety and schizophrenic disorders, creative disorders, bursitis, cirrhosis, paroxysmal nocturnal heamoglobinuria, cancers of the adrenal gland, bladder, bone, tissue disease (MCTD), myelofibrosis, paroxysmal nocturnal heamoglobinuria, cancers of the adrenal gland, bladder, bone, tissue disease, dault respiratory distress syndrome, allergies, ankylosing spondylitis, amyloidosis, anethal werner syndrome, complications of cancer, hemodialysis, and extracorporeal circulation, unifications, and trauma. This sequence was given the Incyte ID no.

New human secretory proteins and polynucleotides, useful for diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. AIDS), neurological disorders (e.g. Alzheimer's), or cell proliferations or cancers

Claim 1; SEQ ID NO 267; 458pp + Sequence Listing; English.

The invention relates to a secretory polynucleotide (designated sptm)

Comprising any of 567 polynucleotide sequence at least 90 % identical to

combinately occurring polynucleotide sequence at least 90 % identical to

the polynucleotide sequence, a polynucleotide complementary to them or an

CC the polynucleotide sequence, a polynucleotide are useful for

RNA equivalent of them. The polypoptide or polynucleotide are useful for

CC tracting, preventing or diagnosing a disease or condition associated with

CC diagnosing, treating or preventing autoimmuse/inflammatory disorders

CC disease), neurological disorders (e.g. epilepsy, Huntington's disease,

CC dementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,

CC multiple sclerosis, cerebral palsy, Parkinson's disease,

CC multiple sclerosis, cerebral palsy, Parkinson's disease,

CC schizophrenia or amnesia), or cell proliferative disorders (e.g.

C psoriasis, polycythemia vera, or cancers including adenocarcinoma,

CC breast, cervix or prostatel)

CC breast, cervix or prostatel

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in gene therapy, as a vaccine or in antisense applications.
ABK92115-ABK92263 represent prostate cancer-associated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated genes are expressed in a prostate tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         prostate cancer. The nucleic acid sequences are particularly useful
                                                                                        Prostate cancer; prostate tumour tissue; human; mammal; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful for diagnosing or treating prostate cancer, as well as foi identifying modulators of prostate cancer or agents that inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB 24; Length 1140;

The invention relates to human nucleic acids (AAI57788-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous asystem diseases, such as Alzhelmer's, Parkinson's disease, Huntington's disease, anyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemclatic/chemckinetic activity, haemotactic/chemckinetic activity, haemotactic/and inflammation, leukaemias and The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human nucleic acids (AAIS7798-AAI61369) and the invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous and central nervous system diseases, such as localised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemoteactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      э,

AAA75163-65 encode human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO copypeptides can be used to modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, requlate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation in proliferation, and/or function of cells that appear in the bone matrow, and leukocytes, treat bone matrow, blood and hematopoietic associated diseases and disorders, atlectasis, bronchial and bronchiectasis, intestinal disorders, spleen associated as shown and bronchiectasis, intestinal disorders, spleen associated as schemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral control of bone and cartilage cells and to treat bone and/or treat disorders associated with the ovaries, and cerebral control of bone and cartilage cells and to treat bone and/or treat disorders associated with the ovaries, and cerebral control of bone and cartilage cells and to treat bone and viral meningits, Alzheimer's Disease, inflammations, bacterial and viral meningits, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.
                                                                                                                            TANGO 266; TANGO 216;; TANGO 261; TANGO 267;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAA75163-65 encode human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to o modulate cellular proliferation, modulate cellular differential on modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, modulate cellular and cellular interactions, modulate cell adhesion in proliferation, modulate cellular interactions, modulate the proliferation of inferentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchietis, bronchiet associated diseases modulate the proliferation, differentiation, as ischemic heart disorders, treat cardiovascular disorders such as ischemic heart disorders, treat cardiovascular disorders such as ischemic heart disorders, treat modulate the proliferation, differentiation, and/or cartilage associated disease on calsorder. They may also be used to treat disorders associated with the ovaries, and cerebral cancers, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular marrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAA75163-65 encode human TANGO 261 proteins. Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having
Cardiac cell anti-apoptotic activity and fragments of it provided
they are not identical to Genbank sequences AI761441.1, AI594390,
Chey are not identical to Genbank sequences AI761441.1, AI594390,
Chey are not identical to Genbank sequences AI761441.1, AI594390,
Chey are not identical to included are expression vectors, host
cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of
MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity
with a candidate agent, where the molecule is a nucleic activity is
comprising MIVR-1, IEX-1, VDUP-1, BTG-2 and TIS-11d or its
comprising MIVR-1, determining if the anti-apoptotic activity is
modulated and thereby identifying a modulator. The cardiac cell antiapoptotic molecules and mucleic acids of the invention are useful for
treating, diagnosing and monitoring progression of such diseases and
disorders as characterised by increased apoptotic cell-death of vascular
condothelial cells e.g. cardiac hypertrophy, myocardial infarction,
stroke, arteriosclerosis and heart failure. The present sequence encodes human MIVR-1.

                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated polypeptide comprising a sequence with 60 % identity to one of prostate specific protein (BSP) sequences. Or comprising an amino acid sequence encoded by one of 136 nucleotide prostate specific nucleic acids sequence. PSNA, (or a sequence that bybridises to it or is 60% identical to it), given in the specification. Also included are a vector comprising the polynucleotide, a host call comprising the vector, an antibody specific for the PSP proteins and a vaccine comprising the protein or polynucleotide. The PSP and PSNA are useful for diagnosing and annitoring the presence and metastases of prostate cancer in a patient. The PSNA is useful for determining the presence of prostate cancer, which induces an immune the level PSNA in a sample. An antibody to the PSP is useful for determining the presence of prostate cancer, which induces an immune response against the prostate cancer call expressing the nucleic acid or polypeptide and a kit is useful for detectining a risk of cancer or presence of cancer in a patient. PSNA is useful as hybridisation probes to detect, characterise and quantify hybridising nucleic acids from both microarrays. Sequences of PSP and PSNA are useful as components in microarrays. Sequences of PSP and PSNA are useful as components in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1064
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       370

NW 004338 and AQ177461. Also included are expression vectors, host cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule expression product. determining if the anti-apoptotic activity is expression product, determining if the anti-apoptotic activity is modulated and thereby identifying a modulator. The cardiac cell anti-apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring progression of such diseases and alsorders as characterised by increased apoptotic cell-death of vascular endothelial cells e.g. cardiac hypertrophy, myocardial infarction, stroke, arteriosclerosis and heart failure. The present sequence is one of the four Genbank sequences (AI764141.1) which are homologous to the cDNA for human MIVR-1 and which are specifically disclaimed. 418 CGCATCGTGTGGCCCTCCCCTCCCACCTCCCTGTGTATAAATATTTACATGTGATGTCTG 1017 634 658 478 718 577 457 397 337 777 277 837 217 897 157 957 97 96 cecarcererecerecereceaecrecerereraraararraearerearerere 37 CACGAGATCGA-CTGCCGCCCACCATCTCGCTGTCAGACGGG--AGGAGCCCCCACCCTAC TCGGTGCGCGCACCCCCCAAACAGAACCATCTTCGACAGGGGACCTGATGGATAGTGCCAGG CTGGGCGCCCCTGCCCCCCAGCAGTAACTCGGGCATCAGCGCCACGTGCTACGGCAGC TCCTCCTTCCAGCACCAGCAGAGCAGTGGGCCGCCCTCCTTGCTGGAGGGGGGGACCGGGTT CCCCCACACACACATCGCGCCCCTAGAGAGCGCAGCCATCTGGAGCAAGAAGAAGAAGAAAAA CCGCCCTTCGCCCAGCGGGAGCGCTTCCACCCTTCCAGCCCACCTATCCGTACCTGCAG 693 CCGCCTTTCGCCCAGCGGGAGCGCTTCCACCGCTTCCAGCCCACCTATCCGTACNTGCAG CAGGGCCCCTGCACCTCCAGCTTCGGGACCCCGAGCAGCAGCTGGAACTGAACCGGGAG TCGGTGCGCGCACCCCCAAACAGAACCATCTTCGACAGTGACCTGATGGATAGTGCCAGG CTGGGCGCCCCTGCCCCCCAGCAGTAACTCGGGCATCAGCGCCCACGTGCTACGGCAGC GGCGGCGCATGGAGGGCCGCCGCCCACCTACAGCGAGGTCATCGGCCACTACCCGGGG TCCTCCTTCCAGCAGCAGAGCAGTGGGCCGCCCTCCTTGCTGGA-GGGGACCCGGCT CCACCACACACACATCGCGCCCCTAGAGAGCGCAGCCATCTGGAGCAAAGAGAAGATAA ACAGAAAGGACACCCTCTAGGGTCCCCAGGGGGGCCGGGCTGGGGCTGCGTAGGTGAA ACAGAAAGGACACCCTCTCTAGGGTCCCCAGGGGGGCCGGGCTGGGGCTGCGTAGGTGAA AAGGCAGAACACTCCGCGCTTCTTAGAAGAGGAGTGAGAGGAAGGCGGGGGGGCGCAGCAA **AAGGCAGAACACTCCGCGCGTTCTTAGAAGAGGAGTGAGAGGAAGGCGGGGGGGCGCAGCAA** 4; Gaps Query Match 60.7%; Score 644.2; DB 24; Length 693; Best Local Similarity 98.1%; Pred. Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having advancially Induced Vascular Receptor (MIVR)-1 polypeptide having cardiac cell anti-apoptotic activity and fragments of it provided they are not identical to Genbank sequences A176141.1, A1594390, and 004338 and AQ177461. Also included are expression vectors, host cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic activity is comprising MIVR-1, IEX-1, VDUP-1, BTG-2 and TIS-11d or its modulated and thereby identifying a modulator. The cardiac cell anti-apoptotic and thereby identifying a modulator. The cardiac cell anti-apoptotic and thereby identifying a progression of such diseases and disorders as characterised by increased apoptotic cell-death of vascular endothelial cells e.g. cardiac hypertrophy, myocardial infarction, etroke, arteriosclerosis and heart failure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     417
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes a murine TANGO 261 polypeptide. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GAGAGAAGATGCCCTGTCCTCAGAAGGATGCCTGTGGCCCTCGGAGAGCACAGTGTCAGG

"TANGO 261"

ò g

AAA75166-68 encode murine TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO 269 boltypeptides can be used to modulate cellular spoiliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation differentiation, and/or function of cells that appear in the bone marrow, and leukocyes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchic asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. How may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, barkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders creating in twas contact the present sequence does not appear in the specification; it was contact and corpus or and treat hepatic disorders. Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -Sequence 1713 BP; 505 A; 439 C; 400 G; 369 T; 0 other; Disclosure; Page -; 175pp; English. created using information provided. / Match 49.0%; Local Similarity 78.4%; Les 703; Conservative 0 (MILL-) MILLENNIUM PHARM INC 99US-0122458 01-MAR-2000; 2000WO-US05226 DA, Holtzman WPI; 2000-579269/54.
